

## Statement on M2166-VBB Seismometer System

Effective immediately, Metrozet has discontinued further production of the M2166/VBB. New orders for the M2166/VBB will not be accepted.

M2166/VBB support will be discontinued in 3 years, March 1, 2019.

During the next 3 years, support of the M2166/VBB will be limited to maintenance of “functional” behavior, not issues of “performance”. Available repair services may be limited by parts on hand.

Metrozet feels that discontinuance of the M2166/VBB at this time, though a difficult decision, will minimize impact on GSN planning and operations, since the sensor has not been deployed as part of the operational global networks, and no on-going network operations are as yet dependent on the M2166.

Sincerely,

Kinemetrics, Inc.
